01 – Concepts Related to Webpages

1. **URL (Uniform Resource Locator):** The address we enter in the browser.
2. **Webpage:** Each individual page displayed by the browser.
3. **Website:** A collection of multiple webpages forming a single site.
4. **Web Standards:**

Structure

HTML

Style

CSS

Behavior

JavaScript

02 – A Taste of HTML

1. Step 1: Right-click => New => Text Document => Enter the following content and save.

```
<details>
  <summary>The secret to mastering programming:</summary>
  Subscribe to Codex and Start Coding Today!
</details>
```

2. Step 2: Change the file extension to `.html` , then double-click to open it.

The file extension `.htm` can also be used here, but the more standard `.html` is recommended.

3. Programmers write **source code**, which is handed over to the browser for rendering.

4. To view a webpage's **source code** using the browser, follow these steps:

Right-click on a blank area of the webpage => Select **View Page Source**.
